00 Quick Overview

ForYield is building the first French MiCA-regulated DeFi yield product on Stellar. We filed our PSCA dossier with the AMF in April 2026, with agrément targeted for October 2026, and an EP simplifié (simplified Payment Institution) licence filed in parallel with the ACPR a dual-licence positioning currently unique in France. Today the product runs on a Base L2 prototype with roughly €7-8M AUM across 50 high-net-worth clients in a pre-agrément pilot. This grant funds the build of the regulated production rail on Stellar, which we launch alongside our PSCA agrément. **The Soroban YieldVault is already deployed, tested and operational on Stellar testnet.**

01 Stellar Integration Plan

1.1 Integration Architecture

ForYield integrates seven building blocks from the official SCF Integration List. Each one removes a real barrier to bringing regulated European capital onto Soroban.

Technical Architecture Doc	github.com/Foryield/soroban-yield-vault (architecture, contract interface, demo walkthrough). Provided alongside this document.
DeFindex	Yield infrastructure layer and allocator routing. The vault allocates capital across whitelisted Soroban yield strategies via DeFindex rather than building strategy routing from scratch. (Tranche 2.)
Blend v2	Soroban lending primitive. The primary yield venue for stablecoin supply positions, accessed through the DeFindex allocator.
Aquarius	AMM and liquidity layer (~\$40M TVL). Provides LP yield strategies and swap liquidity for vault rebalancing.
Soroswap	Soroban-native DEX aggregator. Powers client-facing crypto-to-crypto exchange and internal rebalancing across the full Stellar DEX stack (Phoenix, Aquarius, SDEX).
Allbridge	Cross-chain bridge. Lets EVM and Solana users fund the vault on Stellar without manual bridging secondary onboarding path; primary onboarding is EUR via the regulated fiat ramp.
DFNS	Wallets-as-a-Service. Provisions Soroban-compatible embedded wallets from an email login for non-crypto-native patrimonial clients. DFNS integration.
Stellar Wallets Kit	Wallet connection layer for crypto-native users (Freighter, Albedo, xBull). Live in the testnet vault UI today.

Supporting institutional infrastructure (not Integration Track scope, not funded by this grant): Fireblocks MPC custody for segregated AUM (required under MiCA), Elliptic or Notabene for Travel Rule and KYT screening, and Certora for the Soroban smart contract audit (covered by the Stellar LaunchKit audit credit at Tranche 2).

1.2 Live Deployment Proof (Technical Readiness)

We have gone beyond a plan. The Soroban YieldVault is **deployed, tested and operational on Stellar testnet**, driven by a live web app at vault.for-yield.com that signs real transactions with a Stellar wallet. Deposit, withdrawal and the admin emergency pause all work on-chain. Every id and transaction below is verifiable on Stellar Expert.

YieldVault contract (testnet)	CCKW7NFKDC0T0VU0DLJ6K734ZEYT4TZLQGLIVFZZR6DLUH06U0TENWQ6 view
Deposit asset native XLM (SAC)	CDLZFC3SYJYDZT7K67VZ75HPJVIEUVNIXF47ZG2FB2RMQQVU2HHGCYSC
Public demo wallet	GB73BVQU3QPX44S7MSHULQLWHKTUC3GZB0EW4IUXHQZRAPYBBUAWCH3G
Real deposit tx (1 XLM, shares 1:1)	cb2543...31f6a5
Live web demo	https://vault.for-yield.com
Source (Rust contract + Next.js web)	github.com/Foryield/soroban-yield-vault

Scope is deliberately the Tranche 1 MVP: deposit, proportional share minting (1:1 until a yield strategy is wired), withdrawal and an admin pause. Each deposit and withdrawal emits a structured Soroban event the basis for the AMF-compliant audit trail targeted in production. The demo uses native XLM so any Friendbot-funded account can deposit with no faucet; the contract is asset-agnostic, so a USDC or EURC StellarAssetContract plugs in unchanged at initialize.

1.3 Why Stellar

First EURC and regulated settlement. Stellar is the only L1 where Visa has activated EURC settlement (2025). For a MiCA-regulated product denominating client positions in EUR, EURC on Stellar removes FX volatility and matches the AMF's expectation of regulated stablecoin rails. No other chain offers this regulatory fit for a European yield product.

Second economics that make regulated yield viable. Soroban settles in under five seconds at sub-cent fees. At our ticket sizes this is the difference between a workable and an unworkable cost structure for a managed yield product. The same vault logic on EVM would be prohibitively expensive at retail scale.

Third production-ready ecosystem. DeFindex, Soroswap, Aquarius, Blend, DFNS and Stellar Wallets Kit provide infrastructure that would take months to build from scratch. We focus on the regulated vault, compliance reporting and distribution, and leverage battle-tested Stellar integrations for allocation, liquidity, swaps and wallets.

02 Traction & Metrics

2.1 Pilot Market Test (AUM)

AUM under management	Approximately €7-8M (≈\$7.4M verified snapshot, June 2026) deployed during a pre-agrément market test, while ForYield completes its own PSCA agrément. Capital is deployed across DeFi protocol positions, so the figure reflects live deposited positions, not idle wallet balances.
On-chain proof of AUM	Verified via DeBank portfolio aggregation across three pilot strategy wallets (USD, BTC and ETH): an aggregate of approximately \$7.4M of deposited DeFi positions (June 2026 snapshot). A block explorer reads the wallets as near-empty because capital is deployed into protocols; DeBank aggregates the live positions. Portfolio screenshots available under NDA / on request.
Client profile	European patrimonial savers, 45-65 years old, €500k+ net worth. Off-chain mandates today; crypto exposure routed through an EVM prototype.
Onboarding & compliance	Clients onboarded with Sumsub KYC and an AMF-style suitability assessment. Quarterly reporting. Performance tracked daily with high-water-mark fees.
Regulatory status	The pre-agrément activity was a market test. ForYield's own PSCA agrément (MiCA) is in final review with the AMF, targeted for launch.
AMF-validated business plan	Year 1: €25M AUM, €825k revenue, €270k net. Year 3: €100M AUM, €3.3M revenue, €1.03M net. Profitable from Year 1 in every stress scenario.

2.2 Distribution

Send Target

Data Extension: CRYPTOMACRO_Actifs_ALL (40,730 subscribers)</br>(Using All Subscribers)

Crypto & Macro media

French-language crypto and macro media run by Saturnin Paulet (co-founder, Director of Strategy). **40,730 active newsletter subscribers** (CRYPTOMACRO_Actifs_ALL, June 2026), exactly the European retail-to-HNW crypto audience ForYield serves, available as a Day-1 distribution channel. crypto-macro.com. Featured on BFM Business (Focus Entreprises).

French CGP / CGPI / CIF channel

Built since January 2026 under Cosmo Di Giuseppantonio (Head of Sales, ex-Uptoo). **A waiting list of 48 regulated French intermediaries (CGP, CGPI, CIF) has signed up ahead of launch (CRM segment, Feb 2026), with first Letters of Intent secured.** Named references available on request for intermediaries who consented to disclosure; the remainder confidential by their preference.

EU wealthtech partnerships

Active discussions with multiple EU-regulated wealthtech platforms (under NDA) to distribute the vault as a co-branded MiCA product. Names disclosed upon formal agreement.

Founder distribution proof

Quentin Hopp For Mining LTD: €10M+ revenue, 10,150+ machines, 500+ B2B clients (2024-2025). Demonstrated ability to acquire and serve crypto clients at scale.

04 Team Credentials

ForYield SAS (RCS Paris 989 493 200) is an 11-person team across regulation, on-chain execution, DeFi research, sales and patrimonial advisory. The team already operates a private pilot managing €7-8M AUM; the agrément is the regulatory upgrade to scale a validated product.

Quentin HOPP

Founder & CEO (Paris)

- Master Banking & Finance (KEDGE) + Certification AMF + Bloomberg Market Concepts.
- Co-founder For Mining LTD €10M+ revenue, 10,150+ machines, 500+ clients (2024-2025). Founder OMICRON 21 (€1.2M revenue). Ex-AXA Wealth Services.

Stellar / Soroban Readiness

Unlike teams that are only planning a Stellar build, ForYield has already shipped one. The Soroban YieldVault is written in Rust against soroban-sdk, deployed on testnet, and exercised end-to-end (deposit, withdrawal, pause) with verifiable transactions, driven by a live Next.js web app (vault.for-yield.com, static export on Render). The team uses the Stellar CLI, Stellar Wallets Kit and the Soroban RPC, and has begun the DFNS integration for embedded wallets. Source is open-source under MIT.

05 Competitive Landscape

No regulated French actor combines advice, discretionary management, custody and DeFi-native yield for patrimonial clients. ForYield occupies a vacant segment.

FEATURE	FORYIELD	COINHOUSE / STACKINSAT	SWISSBORG / BITPANDA	UNREGULATED DEFI
MiCA PSCA licence (FR)	In final review, agrément targeted Oct 2026	PSAN only, no managed yield	Not French-regulated	None
DeFi yield strategies	Core offering, on-chain	Buy/sell or savings only	Limited yield products	Yes, but unregulated / DIY
Discretionary mandate	Yes, signed mandate	No	No	No
EUR-denominated (EURC)	EURC-first on Stellar	EUR fiat only	Multi-currency	Mostly USD stablecoins
On-chain settlement	Soroban vault + audit trail	Off-chain custody	Off-chain custody	On-chain, no compliance

06 Regulatory Moat & Social Proof

6.1 Regulatory Moat

PSCA dossier (MiCA)	Filed with the AMF April 2026 25 thematic sections + DORA operational resilience. Agrément targeted October 2026.
EP simplifié licence	Filed in parallel with the ACPR (art. L.522-11-1 CMF). Dual-licence positioning unique in France.
Cybersecurity audit	ACCEIS passed March 2026, all findings remediated and counter-audited.
Custody & compliance stack	Dfns MPC custody, Sumsb KYC/AML, Travel Rule via Elliptic/Notabene, audited Soroban contracts (Certora via LaunchKit at T2).

6.2 Social Proof & Community

Crypto & Macro	crypto-macro.com 40,730 active subscribers. Editor: Saturnin Paulet (saturnindevins.com). Featured on BFM Business .
Company LinkedIn	linkedin.com/company/foryield
Founder track record	For Mining LTD (€10M+ revenue, 500+ clients) and OMICRON 21 (€1.2M revenue) demonstrated crypto execution and client acquisition.
ForYield socials	Company LinkedIn above. Broader social and newsletter presence launches at go-to-market; pre-agrément public communication is deliberately limited.

07 Supporting Documents

Pitch deck (PDF)	Provided alongside this document.
Technical architecture & demo doc	the-arch.md addresses, architecture diagram, contract interface, demo walkthrough. Provided alongside this document.
Source repository	github.com/Foryield/soroban-yield-vault Rust contract, Next.js web, README with testnet deployment.
Application Build (SCF)	Submitted via the SCF Google Sheet three tranches, \$144,000.
